Abstract: The intent of the paper is to establish some interesting integrals involving the product of generalized Bessel-Maitland function with Jacobi polynomial, which are expressed in terms of generalized hypergeometric function. Some special cases are deduced.

Keywords: Jacobi polynomial, generalized hypergeometric function, Wright generalized Bessel-Maitland function.

1 Introduction

In the last decade, many authors (see, e.g., [1-19] have developed numerous integral formulas involving a variety of special functions. Also many integral formulas associated with the Bessel functions of several kinds have been presented (see, e.g., [1-7]). Those integrals involving Bessel-Maitland functions are not only of great interest to the pure mathematics, but they are often of extreme importance in many branches of theoretical and applied physics and engineering (see [12]). Several methods for evaluating infinite or finite integrals involving Bessel-Maitland functions have been known (see, e.g.,[1] and [17]). However, these methods usually work on a case-by-case basis.

Currently, Ghayasuddin and Khan [1], Khan et al. [2-4, 7], Ali et al. [4-6] gave certain interesting new class of integral formulas involving the generalized Bessel-Maitland function, which are expressed in terms of the generalized (Wright) hypergeometric function. In the present sequel to the aforementioned investigations, we present two generalized integral formulas involving generalized Bessel-Maitland functions, which are expressed in terms of the generalized (Wright) hypergeometric function. Some special cases and the (potential) usefulness of our main results are also considered and remarked, respectively.

The Bessel-Maitland function \(J_{\nu}^\mu(z)\) [18;Eq.(8.3)] defined by the following series representation:

\[
J_{\nu}^\mu(z) = \sum_{n=0}^{\infty} \frac{(-z)^n}{n!\Gamma(\mu n + \nu + 1)} = \phi(\mu, \nu + 1; -z).
\]

(1)

Singh et al. [17] introduced the following generalization of Bessel-Maitland function as:

\[
J_{\nu}^{\mu,q}(z) = \sum_{n=0}^{\infty} \frac{(q)_n (-z)^n}{\Gamma(\mu n + \nu + 1)n!},
\]

(2)
where $\mu, \nu, \gamma \in \mathbb{C}, \Re(\mu) \geq 0, \Re(\nu) \geq -1, \Re(\gamma) \geq 0$ and $q \in (0, 1) \cup \mathbb{N}$ and $(\gamma)_0 = 1, (\gamma)_q = \frac{\Gamma(\gamma+q)}{\Gamma(\gamma)}$ denotes the generalized Pochhammer symbol.

Recently, Ghayasuddin and Khan [1] introduced and investigated generalized Bessel-Maitland function defined as

$$J^\mu,\nu,\sigma,\delta,\rho(z) = \sum_{n=0}^{\infty} \frac{(\gamma)_q (-z)^n}{\Gamma(\mu n + \nu + 1) (\delta)_n \rho},$$

where $\mu, \nu, \gamma, \delta \in \mathbb{C}, \Re(\mu) \geq 0, \Re(\nu) \geq -1, \Re(\gamma) \geq 0, \Re(\delta) \geq 0; p, q > 0$ and $q < \Re(\alpha) + p$.

In particular Khan et al. [7] introduced and investigated a new extension of Bessel-Maitland function as follows:

$$J^\mu,\rho,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho(z) = \sum_{n=0}^{\infty} \frac{(\mu)_q (\gamma)_q (-z)^n}{\Gamma(n \beta + \alpha + 1) (\delta)_n \rho},$$

where $\alpha, \beta, \mu, \rho, \nu, \gamma, \sigma, \delta \in \mathbb{C}; \Re(\alpha) > 0, \Re(\beta) > 0, \Re(\rho) > 0, \Re(\mu) > 0, \Re(\nu) > 0, \Re(\sigma) \geq -1, \Re(\gamma) > 0, \Re(\delta) > 0, \Re(\sigma) > 0; p, q > 0$, and $q < \Re(\alpha) + p$.

### 1.1 Relation with Mittag-Leffler functions

(i) On replacing $\alpha$ by $\alpha - 1$ in (1.4), we get the following interesting relation:

$$J^{\mu,\rho,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}_0(z) = E^{\mu,\rho,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z),$$

where $E^{\mu,\rho,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z)$ is the Mittag-Leffler function defined by Khan and Ahmed [8].

(ii) On setting $\mu = \nu = \sigma = \rho = 1$ and replacing $\alpha$ by $\alpha - 1$ in 4, we get

$$J^{1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}_0(z) = E^{1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z),$$

where $E^{1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z)$ is the Mittag-Leffler function defined by Salim and Faraz [15].

(iii) On setting $\mu = \nu = \sigma = \rho = \delta = \rho = 1$ and replacing $\alpha$ by $\alpha - 1$ in 4, we get

$$J^{1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}_0(z) = E^{1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z),$$

where $E^{1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z)$ is the Mittag-Leffler function defined by Shukla and Prajapati [13].

(iv) On setting $\mu = \nu = \sigma = \rho = \delta = \rho = q = 1$ and replacing $\alpha$ by $\alpha - 1$ in 4, we get

$$J^{1,1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}_0(z) = E^{1,1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z),$$

where $E^{1,1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z)$ is the Mittag-Leffler function defined by Prabhakar [10].

(v) On setting $\mu = \nu = \sigma = \rho = \delta = \gamma = p = q = 1$ and replacing $\alpha$ by $\alpha - 1$ in 4, we get

$$J^{1,1,1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}_0(z) = E^{1,1,1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z),$$

where $E^{1,1,1,1,\gamma,\sigma,\rho,\beta,\nu,\sigma,\delta,\rho}(z)$ is the Mittag-Leffler function defined by Wiman [19].
(vi) On setting $\mu = \nu = \alpha = \rho = \delta = \gamma = p = q = 1$, $\alpha = 0$ and replacing $\alpha$ by $\alpha - 1$ in (4), we get

$$I_{0.1.1.1.1}^{1.1.1}(-z) = E_\beta(z),$$

where $E_\beta(z)$ is the Mittag-Leffler function defined by Ghosta Mittag-Leffler [9].

2 Integrals involving extended Bessel-Maitland with Jacobi polynomials

The Jacobi polynomial $P_n^{(\alpha,\beta)}(z)$ is defined by (see [11], [14]):

$$P_n^{(\alpha,\beta)}(z) = \frac{(1 + \alpha)_n}{n!} \, _2F_1 \left[ \begin{array}{c} -n, (1 + \alpha + \beta + n) \\ (1 + \alpha) \end{array} ; \frac{1 - z}{2} \right],$$

or equivalently

$$P_n^{(\alpha,\beta)}(z) = \sum_{k=0}^{n} \frac{(1 + \alpha)_n (1 + \alpha + \beta)_n}{k! (n - k)! (1 + \alpha + \beta)_n} \left( \frac{z - 1}{z} \right)^k.$$  \hfill (12)

From (11) and (12), we find

$$P_n^{(\alpha,\beta)}(1) = \frac{(1 + \alpha)_n}{n!},$$

where $P_n^{(\alpha,\beta)}(z)$ is a polynomial of degree precisely $n$.

In this section, we define some interesting integral formulas involving a product of extension Bessel-Maitland function and Jacobi polynomials as follows

$$I_1 = \int_{-1}^{1} x^\lambda (1-x)^\alpha (1+x)^\delta P_n^{(\alpha,\beta)}(x) \gamma_{\eta,\nu,\beta,\sigma,\omega} |z| (1+x) \delta \, dx$$

$$= \int_{-1}^{1} x^\lambda (1-x)^\alpha (1+x)^\delta P_n^{(\alpha,\beta)}(x) \sum_{k=0}^{\infty} \frac{\gamma_{\eta,\nu,\beta,\sigma,\omega} |\gamma| \mu^k \nu^k (1+x)^{\delta + k \lambda} \sigma^{\lambda + k \mu} \omega^{\lambda + k \nu} \nu^k \omega^k \sigma_k (\omega) \, p_n^{(\alpha,\beta)}(\sigma_k (\omega))}{\Gamma(\eta k + \epsilon + 1) \Gamma(\nu k + \epsilon + 1) \Gamma(\delta + k \lambda) \Gamma(\lambda + k \mu) \Gamma(\mu + k \nu) \Gamma(\omega k + \epsilon + 1) \Gamma(\lambda + k \beta) \Gamma(\lambda + k \gamma) \Gamma(\nu + k \delta)}.$$  \hfill (14)

Interchanging the order of summation and integration, we can write above expression

$$\sum_{k=0}^{\infty} \frac{\mu^k \nu^k (1+x)^{\delta + k \lambda} \sigma^{\lambda + k \mu} \omega^{\lambda + k \nu} \nu^k \omega^k \sigma_k (\omega) \, p_n^{(\alpha,\beta)}(\sigma_k (\omega))}{\Gamma(\eta k + \epsilon + 1) \Gamma(\nu k + \epsilon + 1) \Gamma(\delta + k \lambda) \Gamma(\lambda + k \mu) \Gamma(\mu + k \nu) \Gamma(\omega k + \epsilon + 1) \Gamma(\lambda + k \beta) \Gamma(\lambda + k \gamma) \Gamma(\nu + k \delta)}.$$  \hfill (15)

Using the formula given in ([12], p.52):

$$\int_{-1}^{1} x^\lambda (1-x)^\alpha (1+x)^\delta P_n^{(\alpha,\beta)}(x) \, dx = \frac{(-1)^n 2^{\alpha + \delta + 1} \Gamma(\delta + 1) \Gamma(\alpha + n + 1) \Gamma(\delta + \beta + 1)}{n! \Gamma(\delta + \beta + n + 1) \Gamma(\delta + n + 2) \Gamma(\delta + \beta + n + 2)} \times \frac{\beta - 1}{3} F_2 \left[ \begin{array}{c} -\lambda, \delta + \beta + 1, \delta + n + 1 \\ \delta + \beta + n + 1, \delta + \alpha + n + 2 \end{array} ; 1 \right].$$  \hfill (16)
From 15 and 16, we find
\[
I_1 = \frac{(-1)^2\alpha^2 + 1 \Gamma(\delta + kh + 1)\Gamma(\alpha + n + 1)\Gamma(\delta + kh + \beta + 1)}{n!\Gamma(\delta + kh + \beta + n + 1)\Gamma(\delta + kh + \alpha + n + 2)} \sum_{
\begin{array}{c}
-\lambda, \\
\delta + kh + \beta + 1, \\
\delta + kh + 1,
\end{array}
\begin{array}{c}
\delta + kh + \beta + n + 1, \\
\delta + kh + \alpha + n + 2;
\end{array}
\] 
\times \sum_{m=0} F_2 \left[ \begin{array}{c}
\mu, \gamma, \\
\alpha + \beta;
\end{array} \right] \right]. 
\] (17)

Provided

(i) \(\eta, \varepsilon, \nu, \sigma, \omega, \mu, \rho, \gamma, \lambda \in \mathbb{C};\)
\(\Re(\mu) \geq 0, \Re(\varepsilon) \geq -1, \Re(\gamma) \geq 0, \Re(\rho) \geq 0, \Re(\eta) \geq 0, \Re(\sigma) \geq 0, \Re(\omega) \geq 0, \Re(\nu) \geq 0;\)
\(p, q > 0\) and \(q < \Re(\alpha) + 1.\)

(ii) \(\Re(\alpha) > -1\) and \(\Re(\beta) > -1.\)

\[
I_2 = \int_{-1}^{1} (1-x)^{\delta} (1+x)^{\beta} p_n^{(\alpha, \beta)}(x) \Gamma(\eta + \lambda + 1) / (\nu + \omega) \nu \omega \Gamma(1-x)^{\mu} dx
\] (18)

Using 12 in above expression, we get
\[
\sum_{k=0}^{\infty} \frac{(\mu)_{\xi_k}(\gamma)_{\eta_k}(z)^k}{\Gamma(\eta + \lambda + 1) / (\nu + \omega) \nu \omega} \sum_{m=0}^{\infty} \frac{(-m)_{\mu}(1+\rho+\sigma+m)_\mu}{(1+\rho)_\mu 2^k k!} \int_{-1}^{1} (1-x)^{\delta+k} (1+x)^{\beta} p_n^{(\alpha, \beta)}(x) dx. 
\] (19)

Again using 12 in 20, we get
\[
\sum_{k=0}^{\infty} \frac{(\mu)_{\xi_k}(\gamma)_{\eta_k}(z)^k}{\Gamma(\eta + \lambda + 1) / (\nu + \omega) \nu \omega} \sum_{m=0}^{\infty} \frac{(-m)_{\mu}(-n)_{\mu}(1+\rho+\sigma+m)_\mu(1+\alpha+\beta+n)_\mu}{(1+\rho+\omega)_\mu 2^k (k!)^2} \int_{-1}^{1} (1-x)^{\delta+k+2} (1+x)^{\beta} dx. 
\] (21)

Using the formula
\[
\int_{-1}^{1} (1-x)^{n+\alpha} (1+x)^{n+\beta} dx = 2^{n+\alpha+\beta+1} B(1+\alpha+n, 1+\beta+n). 
\] (22)

Here 22 becomes,
\[
I_2 \frac{\Gamma(1+\rho+m) \Gamma(1+\alpha+n)}{m!n!} \sum_{k=0}^{\infty} \frac{(-m)_{\mu}(-n)_{\mu}(1+\rho+\sigma+m)_\mu(1+\alpha+\beta+n)_\mu}{\Gamma(1+\rho+k) \Gamma(1+\alpha+k)(k!)^2} \int_{-1}^{1} (1-x)^{\delta+kh+2} (1+x)^{\beta} dx. 
\] (23)

Provided

(i) \(\xi, \eta, \varepsilon, \nu, \sigma, \omega, \mu, \rho, \gamma, \lambda \in \mathbb{C};\)
\(\Re(\mu) \geq 0, \Re(\varepsilon) \geq -1, \Re(\gamma) \geq 0, \Re(\rho) \geq 0, \Re(\eta) \geq 0, \Re(\sigma) \geq 0, \Re(\omega) \geq 0, \Re(\nu) \geq 0;\)
\(p, q > 0\) and \(q < \Re(\alpha) + 1.\)
(ii) \( \Re(\alpha) > -1 \) and \( \Re(\beta) > -1 \).

\[
I_3 = \int_{-1}^{1} (1-x)^{\rho}(1+x)^{\sigma} P_1^{(\alpha, \beta)}(x) \sum_{k=0}^{\infty} \frac{1}{\Gamma(\eta k + \lambda + 1)(\nu)\epsilon_k(\omega)} \int_{-1}^{1} (1-x)^{\rho+\kappa}(1+x)^{\sigma+k}(x) dx.
\]

Now, by using (24) in (24), we get

\[
\sum_{k=0}^{\infty} \frac{(\mu)\xi_k(\gamma)\nu_k(-z)^k}{\Gamma(\eta k + \lambda + 1)(\nu)\epsilon_k(\omega)} \int_{-1}^{1} (1-x)^{\rho+\kappa}(1+x)^{\sigma+k}(x) dx.
\]

Using (22) in (25), we get

\[
I_3 = \frac{2^{\rho+\sigma+1}(1 + \alpha)_n}{n!} \sum_{k=0}^{\infty} \frac{(-n)_k(1 + \alpha + \beta + n)_k}{(1 + \alpha)_k(k)!} \frac{1}{\eta, \lambda, \nu, \omega, \mu, \rho, \gamma, \lambda} B(1 + \rho + \kappa h + k + 1, 1 + \sigma + t k).
\]

Provided

(i) \( \xi, \eta, \nu, \sigma, \omega, \mu, \rho, \gamma, \lambda \in \mathbb{C} \);
\( \Re(\mu) \geq 0, \Re(\lambda) \geq -1, \Re(\gamma) \geq 0, \Re(\rho) \geq 0, \Re(\eta) \geq 0, \Re(\sigma) \geq 0, \Re(\omega) \geq 0, \Re(\nu) \geq 0, \Re(\nu) \geq 0, \Re(\nu) \geq 0; p, q > 0 \) and \( q < \Re(\alpha) + 1 \).

(ii) \( \Re(\alpha) > -1 \) and \( \Re(\beta) > -1 \).

\[
I_4 = \int_{-1}^{1} (1-x)^{\rho}(1+x)^{\sigma} P_1^{(\alpha, \beta)}(x) \sum_{k=0}^{\infty} \frac{1}{\Gamma(\eta k + \lambda + 1)(\nu)\epsilon_k(\omega)} \int_{-1}^{1} (1-x)^{\rho+\kappa}(1+x)^{\sigma-k}(x) dx.
\]

Now, by using (22) in (27), we obtain

\[
\sum_{k=0}^{\infty} \frac{(\mu)\xi_k(\gamma)\nu_k(-z)^k}{\Gamma(\eta k + \lambda + 1)(\nu)\epsilon_k(\omega)} \int_{-1}^{1} (1-x)^{\rho+\kappa}(1+x)^{\sigma-k}(x) dx.
\]

Using (22) in (28), we get

\[
I_4 = \frac{2^{\rho+\sigma+1}(1 + \alpha)_n}{n!} \sum_{k=0}^{\infty} \frac{(-n)_k(1 + \alpha + \beta + n)_k}{(1 + \alpha)_k(k)!} \frac{1}{\eta, \lambda, \nu, \omega, \mu, \rho, \gamma, \lambda} B(1 + \rho + \kappa h + k + 1, 1 - \sigma + t k).
\]

Provided

(i) \( \xi, \eta, \nu, \sigma, \omega, \mu, \rho, \gamma, \lambda \in \mathbb{C} \);
\( \Re(\mu) \geq 0, \Re(\lambda) \geq -1, \Re(\gamma) \geq 0, \Re(\rho) \geq 0, \Re(\eta) \geq 0, \Re(\sigma) \geq 0, \Re(\omega) \geq 0, \Re(\nu) \geq 0, \Re(\nu) \geq 0; p, q > 0 \) and \( q < \Re(\alpha) + 1 \).
(ii) \( \Re(\alpha) > -1 \) and \( \Re(\beta) > -1 \).

\[
I_5 = \int_{-1}^{1} \frac{1}{1 - x} \frac{1}{(1 + x)^{\sigma}} \frac{\sigma}{\eta, \lambda, \nu, \omega, \rho} \left[ z(1 + x)^{-h} \right] dx
\]

\[
= \sum_{k=0}^{\infty} \frac{(\mu)_{\eta k}(\gamma)_{\eta k}(-z)^{\lambda}}{I(\eta k + \lambda + 1)(\nu)_{\eta k}(\omega)_{\eta k}} \int_{-1}^{1} \frac{1}{1 - x} \frac{1}{(1 + x)^{\sigma - \nu k}} \frac{\sigma}{\eta, \lambda, \nu, \omega, \rho} \left[ z(1 + x)^{-h} \right] dx.
\] (30)

By using (22) in (31), we get

\[
\sum_{k=0}^{\infty} \frac{(\mu)_{\eta k}(\gamma)_{\eta k}(-z)^{\lambda}}{I(\eta k + \lambda + 1)(\nu)_{\eta k}(\omega)_{\eta k}} \frac{(1 + \alpha)_n}{n!} = \sum_{k=0}^{\infty} \frac{(-n)_k(1 + \alpha + \beta + \nu k)}{(1 + \alpha)_k} \times \int_{-1}^{1} \frac{1}{1 - x} \frac{1}{(1 + x)^{\sigma - \nu k}} \frac{\sigma}{\eta, \lambda, \nu, \omega, \rho} \left[ z(2)^{-h} \right] \left( 1 + \rho + k, 1 + \sigma - \nu k \right). \] (31)

Again using (22) in (31), we get

\[
I_5 = \frac{2^{\rho + \sigma + 1}(1 + \alpha)_n}{n!} \sum_{k=0}^{\infty} \frac{(-n)_k(1 + \alpha + \beta + \nu k)}{(1 + \alpha)_k} \times \frac{\sigma}{\eta, \lambda, \nu, \omega, \rho} \left[ z(2)^{-h} \right] \left( 1 + \rho + k, 1 + \sigma - \nu k \right). \] (32)

Provided

(i) \( \xi, \eta, \nu, \sigma, \omega, \mu, \rho, \gamma, \lambda \in \mathbb{C}; \)
\( \Re(\mu) \geq 0, \Re(\lambda) \geq -1, \Re(\gamma) \geq 0, \Re(\eta) \geq 0, \Re(\sigma) \geq 0, \Re(\nu) \geq 0, \Re(\rho) \geq 0, \Re(\alpha) + 1 \)

(ii) \( \Re(\alpha) > -1 \) and \( \Re(\beta) > -1 \).

3 Special cases

(i) On setting \( \alpha = \beta = \rho = \sigma = 0 \) and replacing \( \delta \) by \( \lambda - 1 \), the integral \( I_2 \) transforms into the following integral involving Legendre polynomials (see [11], [14]):

\[
I_6 = \int_{-1}^{1} \frac{1}{1 - x} \frac{1}{(1 + x)^{\sigma - 1}} P_n(x) P_m(x) J^{\mu, \gamma} \left[ z(1 - x)^{h} \right] dx
\]

\[
= 2^{\lambda} \sum_{k=0}^{\infty} \frac{(-m)_k(-n)_k(1 + m)_k(1 + n)_k}{(k!)^2} J^{\mu, \gamma} \left[ z(2)^{h} \right] \left( \lambda + k h + 2k, 1 \right). \] (33)

(ii) On setting \( \alpha = \beta = 0 \) and replacing \( \rho \) by \( \rho - 1 \) and \( \sigma \) by \( \sigma - 1 \) then \( I_3 \) transforms into following integral involving Legendre polynomial (see [11], [14]):

\[
I_7 = \int_{-1}^{1} \frac{1}{1 - x} \frac{1}{(1 + x)^{\sigma - 1}} P_n(x) P_m(x) J^{\mu, \gamma} \left[ z(1 - x)^{h} (1 + x)^{\nu} \right] dx
\]

\[
= 2^{\rho + \sigma + 1} \sum_{k=0}^{\infty} \frac{(-n)_k(1 + n)_k}{(k!)^2} J^{\mu, \gamma} \left[ z(2)^{h + \nu} \right] \left( \rho + k h + k, \sigma + \nu k \right). \] (34)

(iii) On taking \( \alpha = \beta = 0 \) and replacing \( \rho \) by \( \rho - 1 \) and \( \sigma \) by \( \sigma - 1 \) then \( I_4 \) transforms into following integral involving Legendre polynomial (see [11], [14]):

\[
I_8 = \int_{-1}^{1} \frac{1}{1 - x} \frac{1}{(1 + x)^{\sigma - 1}} P_n(x) P_m(x) J^{\mu, \gamma} \left[ z(1 - x)^{h} (1 + x)^{-\nu} \right] dx
\]

\[
= 2^{\rho + \sigma + 1} \sum_{k=0}^{\infty} \frac{(-n)_k(1 + n)_k}{(k!)^2} J^{\mu, \gamma} \left[ z(2)^{h - \nu} \right] \left( \rho + k h + k, \sigma - \nu k \right). \] (35)
(iv) On taking $\alpha = \beta = 0$ and replacing $\rho$ by $\rho - 1$ and $\sigma$ by $\sigma - 1$ then $I_5$ transforms into following integral involving Legendre polynomial (see [11], [14]):

$$I_9 = \int_{-1}^{1} (1-x)^{\rho-1}(1+x)^{\sigma-1}P_n(x)\sum_{k=0}^{\infty} \frac{(-n)k(1+n)k}{(k!)^2} \binom{\mu \xi \gamma q}{\eta \lambda \nu \varepsilon \omega \rho} e^{-\frac{1}{x}} B(\rho + k, \sigma - nk).$$

(v) On replacing $\varepsilon$ by $\varepsilon - 1$ in $I_1$ and then by using 5, we get

$$I_{10} = \int_{-1}^{1} x^\lambda (1-x)^\alpha (1+x)^\beta \binom{\mu \xi \gamma q}{\eta \lambda \nu \varepsilon \omega \rho} e^{-\frac{1}{x}} B(\rho + k, \sigma - hk).$$
